

Sustainability procurement policy

The Miyoshi Kasei Group collaborates with our suppliers in an effort to ensure that our raw materials meet our Quality standards, General terms and conditions, as well as CSR strategy. In conducting transactions with other parties, we require that they strictly fulfill the same commitment and engagement as we do.

This policy's aim is to describe our commitment towards sustainable procurement, and ensure that it is passed on to our suppliers.

It applies to all Miyoshi Kasei Group workers, especially those involved in procurement, in direct or indirect relationship with suppliers, implementing CSR policies or in assessing CSR compliance.

- **Risks assessment**

We continuously work toward identifying risks associated with our procurement process, on CSR related fields: economic, social, ethical and environmental. When facing the choice of a new product, new supplier, new development, or new process, these key items are analyzed in order to make the best decision in accordance to our core principles.

- **Suppliers awareness**

We commit to pass on our sustainable procurement requirements to our suppliers. For those who are not engaged in such approach as Corporate Social Responsibility, we are able to support them in order to raise their awareness, and help them reaching the same high level of ethic.

- **Suppliers' commitment**

We require our suppliers to have values that are directed to conducting business in full compliance with the law and with the highest ethical standards. They must sign our Code of Conduct, and act towards implementing all necessary actions to respect it.

- Suppliers' assessment

We use our Code of Conduct as well as dedicated questionnaires and on-site audits to assess the quality of our suppliers in regard to their involvement in Corporate Social Responsibility: environmental impact, social involvement, ethical behavior, business practices. In case suppliers policies are not fully aligned with our requirements, they have all our support to work toward compliance.

Purchasing managers, quality management managers, CSR managers or any people in charge of these topics through the companies, are responsible to enforce this policy.

This policy will be reviewed annually or as soon as the need arises.
